

EmolliZoo

Further information

Profile

Personalise the app for your child, choose their favourite animal and colour.

Children's section

The keeper's hut

By reading along with a parent, children can find out how the zookeeper helps her animals with eczema, and learn more about eczema and emollients.

Treatment centre

Play three fun games, each designed to encourage children to use the correct application methods for each emollient type. Keep going until the emollient bar fills up and the animals are happy!

Treatment calendar

A simple way to keep track of your child's emollient usage and eczema. You can set reminders, confirm emollient use and note how the skin appears each day. Press and hold the Parents' button **P** to find the set up area. Up to 5 emollient reminders can be added per day.

Rewards

Children collect stickers for playing the application games, then for correctly applying their emollient for 1 week and then 2 weeks- can they get all 8 stickers? Complete the Keeper's quiz for a certificate too.

Parents' section **P**

This section, just for adults, lets you set up your child's emollient routine and gives you gentle reminders when it's time to apply emollients.

Treatment setup

Add up to 5 emollient reminders each day, and choose which emollient type is needed, either on the skin, when washing, or in the bath. This will update the child's and parents' calendars and notify you when to apply an emollient.

Eczema info

More in-depth information about eczema, emollients and advice for helping children manage their skin at school. All educational information in EmolliZoo has been accredited by National Eczema Society.

Parents' Calendar

How often has your child applied their emollient? Click the summary button to see how they're doing. Select a day to confirm emollient applications, track the severity of the eczema, or use the notes button to record an entry about the child's skin on that day.

We hope you enjoy the app, and that you find it a useful tool to help manage and improve your child's emollient use and management of eczema.

The EmolliZoo team.
